

CHANGES TO AATB STANDARDS FOR TISSUE BANKING

SECTION A - GENERAL INFORMATION

A2.000 Definitions of Terms

Current (13th edition)

(None; this is a new definition)

(with amendments)

SKIN PREP - The application of antiseptic solution to decontaminate the skin. This is a continuous process that is performed without delay between steps; it does not include shaving hair, although this can be done if preferred. The manufacturer's written recommendations must be followed, including that the antiseptic agent should remain in place for the full time.

(as amended)
